

WATER COMMANDER™

The powerful
water-powered
backup sump pump

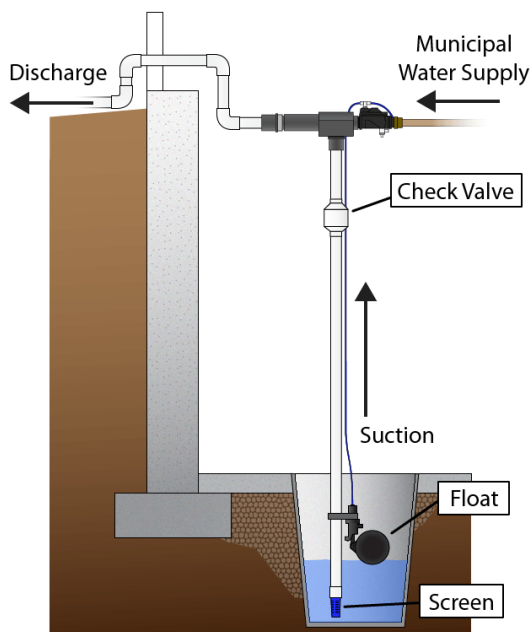

Overview

Water Commander™ is a non-electric backup sump pump that uses your home's water pressure to operate – no battery or electricity is needed. It will pump as needed during power outages or primary sump pump failure. It will also work in tandem with your electrical sump pump if necessary during an extreme downpour.

Water Commander™ is powerful. It can easily match or out pump your electric sump pump. Unlike battery back-ups, Water Commander™ will operate as needed for an unlimited amount of time. No maintenance is required.

Water Commander™ is dependable. The pump will activate and empty your sump automatically; there is no need to be home as you would if using a generator. Even if you are gone for weeks, Water Commander™ will stay on duty and operate at full power as needed.

Standard Installation

Water Commander™
Model MG22

Model Specifications

Model MG22 requires a minimum 3/4" water supply, 40 to 125 PSI city water pressure, and a 1 1/4" PVC suction and discharge pipe.

MG22 Pumping Capacity at 10ft Lift

	40 PSI	60 PSI	80 PSI
GPM	13.5	22.1	30.7
GPH	809	1,324	1,843
